

Descargamos el Minecraft Forge desde [aquí](#). Lo instalamos con:

```
java -jar forge-xxx-installer.jar
```

...indicándole donde está la carpeta .minecraft.

Descargamos el [.jar de WordEdit](#) para la versión de Minecraft que estemos ejecutando y lo guardamos dentro de la carpeta mods de .minecraft. Si no está creada la creamos:

```
/home/usuario/.minecraft/mods/
```

En el lanzador de versiones de Minecraft descargamos y abrimos la versión que nos aparece como Forge.

Al abrir el juego y crear un nuevo mundo, los trucos deben estar activados. Es decir, en SI.

En el juego, presionamos la tecla t para abrir el chat y ejecutamos: (una línea a la vez):

```
