

Tanto si te has conectado en modo consola, como si lo has hecho por SSH, es posible ver el modelo del router desde la consola misma. Para ello ejecuta:

```
show version | include Cisco
```

En mi caso, el resultado es:

```
Cisco IOS Software, C1900 Software (C1900-UNIVERSALK9-M), Version 15.1(4)M4, RELEASE SOFTWARE (fc1)  
Copyright (c) 1986-2012 by Cisco Systems, Inc.  
use. Delivery of Cisco cryptographic products does not imply  
A summary of U.S. laws governing Cisco cryptographic products may be found at:  
Cisco CISC01941/K9 (revision 1.0) with 491520K/32768K bytes of memory.
```

Lo que me da la info de que el modelo de mi router es:

```
CISC01941/K9
```
